CREATIVE OPS DASHBOARD

The AI Creative Machine

How I turned a creative funnel into a system that runs itself

Overview · structure and workflow, no account data

AT A GLANCE

What AI now runs for me

Research

- Daily competitor ad tracking
- Weekly market report analysis
- Trend and organic post scans

Production

- Any ad adapted from a link
- Avatar, kinetic and story videos
- Edit requests with versions

Ad kits

- One concept to a full test set
- A different hook per piece
- Fact check and final QC

Testing

- Weekly winner detection
- Variations of every winner
- The weekly test report

Performance

- Live view across platforms
- Fatigue and unscaled winners
- Hooked-but-weak and variate lists

Creators and launch

- TikTok One briefs and videos
- Influencer search and AI outreach
- Naming, sizing, upload via Additor

WHY I BUILT IT

Creative is the lever. The work around it was the bottleneck.

Scattered research

Competitor ads, trends and organic hits lived in ten different tabs.

Manual production

Every variation was a ticket, a brief and a wait.

Uneven test reading

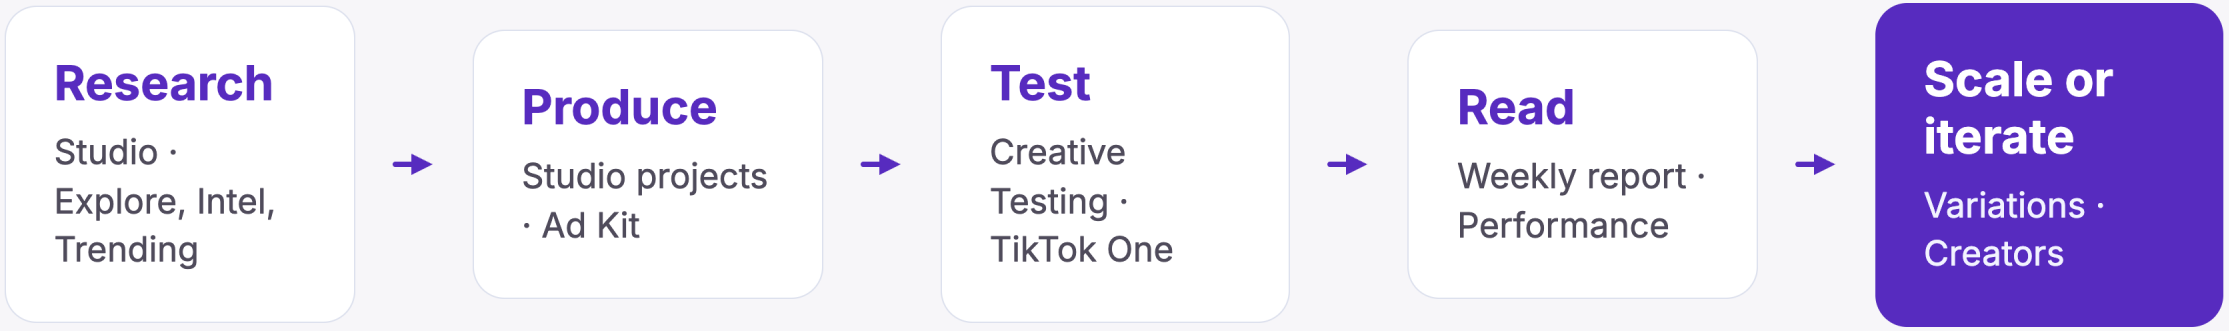

Each week a different window, a different lens, a different conclusion.

Stalled winners

Good ads were found, then not scaled or iterated in time.

THE IDEA

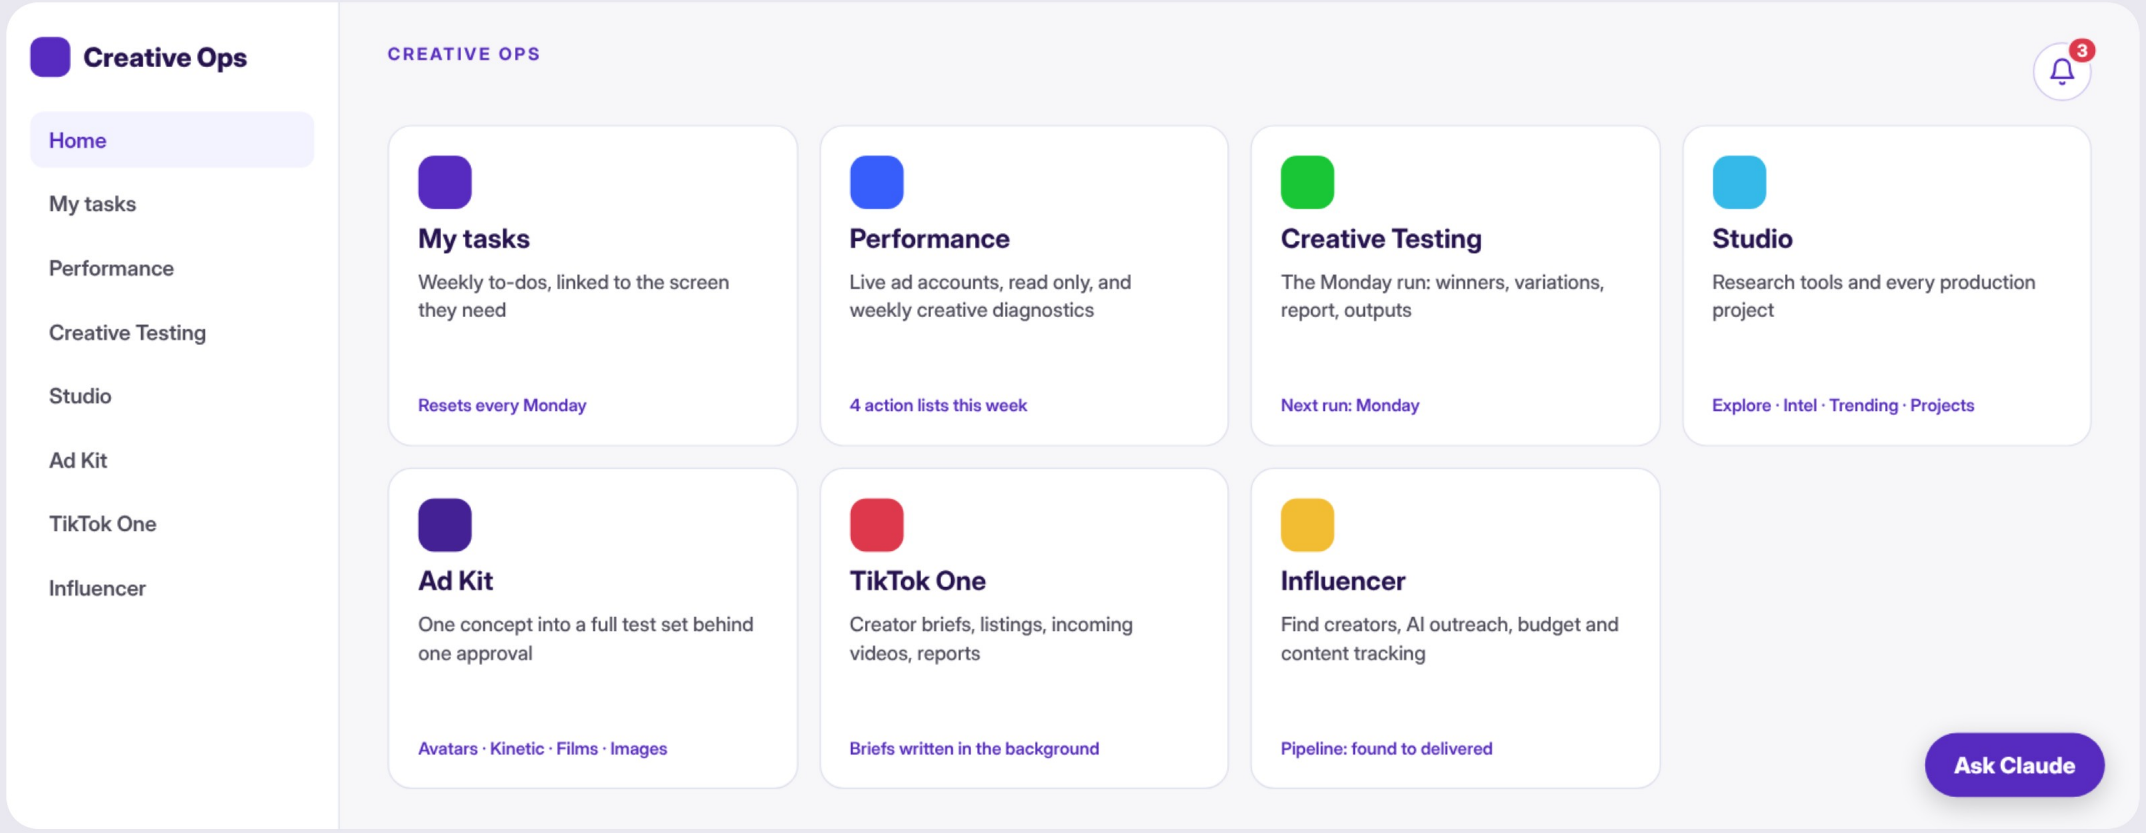

One loop, run every week

Every Monday the loop starts again from what last week's tests taught me. I approve plans and spend; AI does the searching, writing, editing and reading.

THE MAP

One dashboard to rule them all

THE ENGINE UNDERNEATH

Every tab runs on its own skills

A skill is a playbook the AI follows. I built each one over months and trained it on my own test results plus outside references, so the AI works the way I work.

Area	Skills	What they bring
Studio · Research	creative-intel · weekly-competitor-report · video-ad-breakdown	Why competitor ads work, week over week
Studio · Projects	competitor-video-remake · image-variation-engine · video-hook-generator · higgsfield-ad-multiplier	Any reference turned into a brand ad
Ad Kit	ad-kit · story-ad-writer · kinetic-ads · arcads-avatar-batch	A full test set from one concept
Creative Testing	meta-test-variations · meta-creative-test-report	Winners found, varied and reported
Performance	creative-analysis · campaign-analysis · cohort-analysis · creative-fatigue-watch	What to refresh, scale or iterate
TikTok One	ttcc-brief-writer · ttcc-campaign-ops	Briefs and launch-ready creator videos
Influencer	brief-writer · script-writer · hook-writer	Briefs, scripts and hooks for creators
Everywhere	telicall (facts and lint) · design system	Right claims, right brand, every time

CONNECTED TOOLS

The outside tools the skills drive

Claude Code
Skills, scheduled runs, the dashboard itself

Higgsfield
AI video and image generation, video edits

Arcads
AI avatar actors, images, social and creator search

Meta Ads
Campaign results and the Ad Library, read only

TikTok Ads
Reports, trends and TikTok One creator videos

Adjust
Installs and revenue, including Google Ads

Additor
Naming, sizing, upload and campaign launch

SensorTower
Weekly competitor creative report

Google Drive
Every output filed and shared

Slack
Weekly reports and alerts

Design System
Official logo, end cards, colors and type

Local render stack
Headless browser, ffmpeg and speech-to-text for captions

STUDIO · RESEARCH

Every source of ideas in one tab row

Research no longer starts from a blank page. Ads, trends and organic hits are collected for me, so a brief starts from what already works.

Explore

TikTok trends, YouTube, Google Ads and live Meta ad search in one place.

Competitor Intel

Competitor videos pulled from SensorTower automatically; widest-reach ads checked every morning.

Image ads

Last week’s image ads pulled from SensorTower and analyzed automatically.

Trending

Organic TikTok, Instagram and X posts ranked by how fast they grow.

STUDIO · PROJECTS

From a link to a finished ad, tracked end to end

Queued → In production → Delivered → **Uploaded**

Adapt from a link

Paste any ad; it comes back rebuilt for the brand, with its design system and end card.

Edit requests

Write what should change. Every version stays: Original, Edit 1, Edit 2.

Credit permission

Free edit tools first; AI credits only when ticked, up to a cap.

AD KIT

One single prompt in, a complete ad set out

Avatar clips

AI presenters, each script with its own hook, edited with captions and app proof.

Kinetic ads

Animated typography with real app screens, rendered locally at no credit cost.

Story films

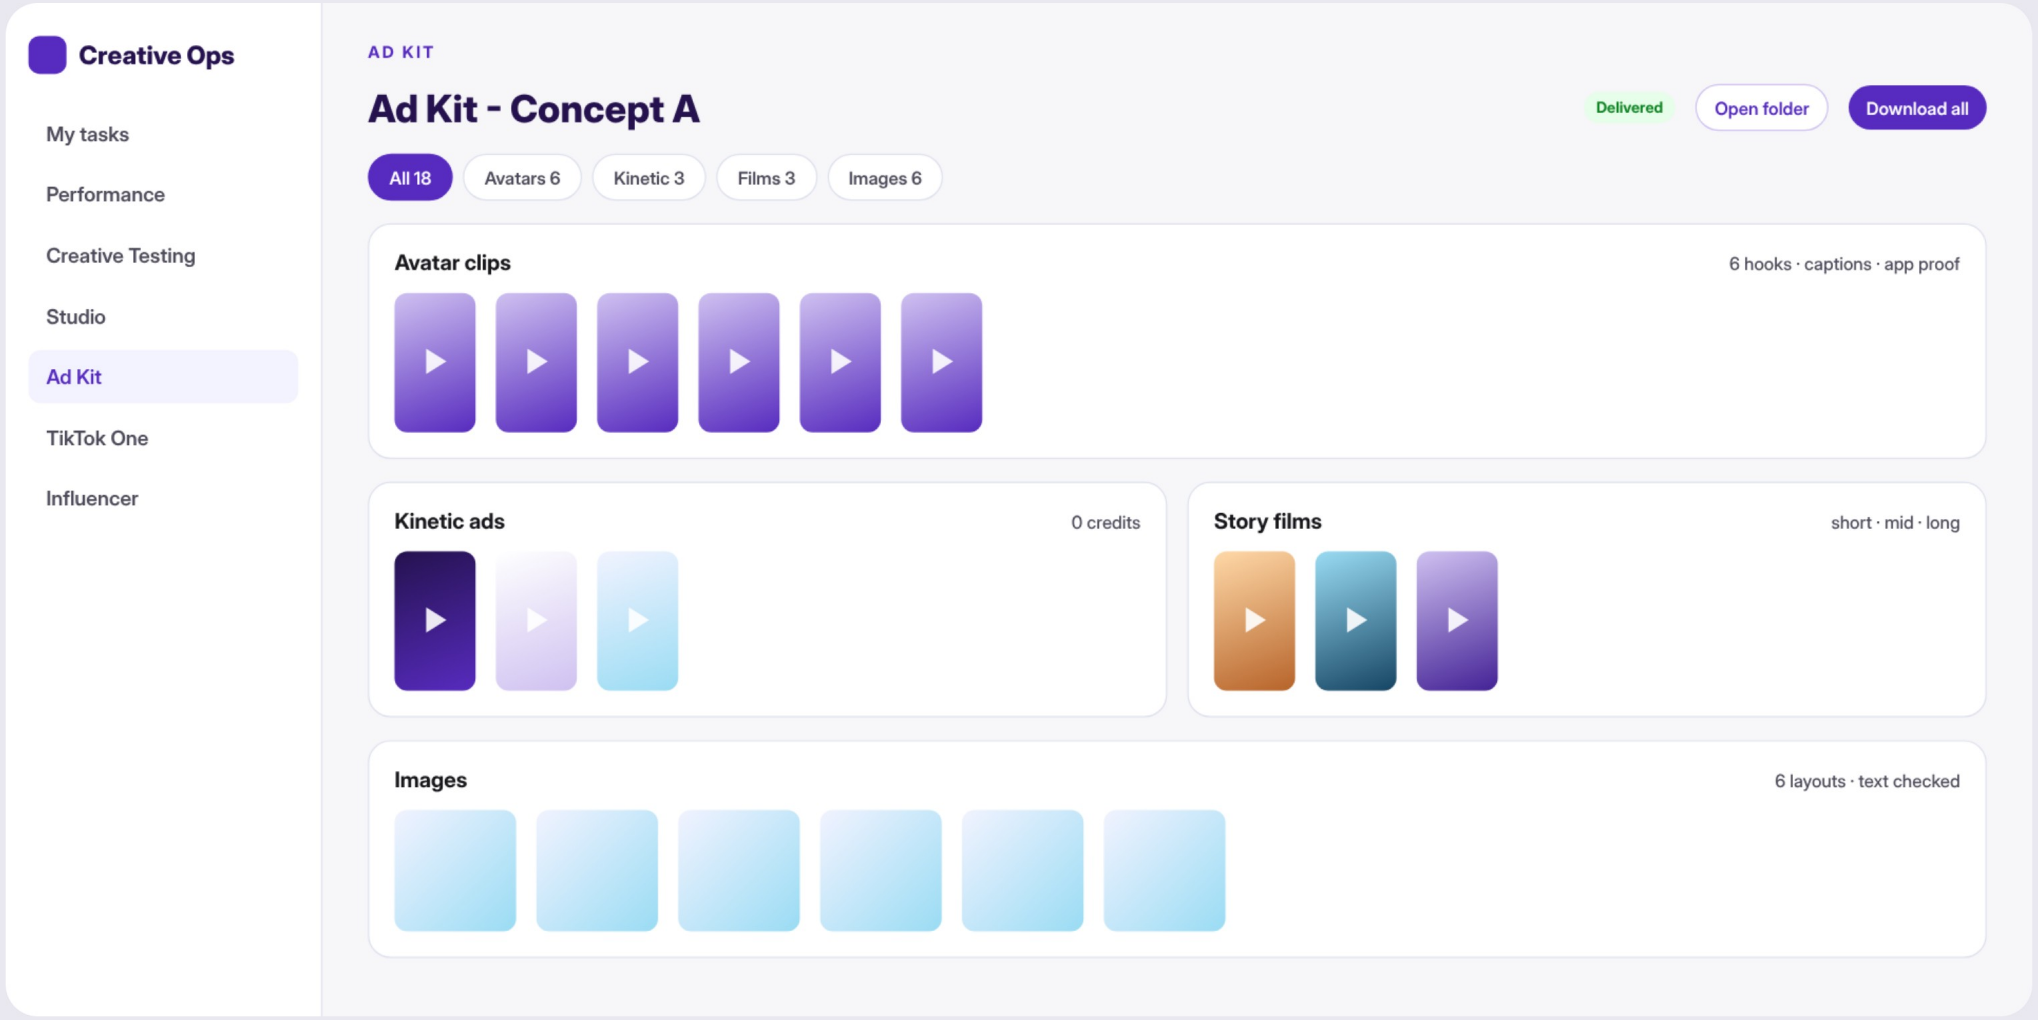

Short, mid and long narrative films with dialogue, captions and the end card.

Static images

Image ads in several layouts, each checked for on-image text errors.

I type one concept; the kit comes back as a launch-ready ad set behind a single plan approval. Every piece gets a different hook mechanic, every claim is checked against the brand’s fact sheet, and a final quality check runs before the kit is marked done.

AD KIT · IN THE DASHBOARD

CREATIVE TESTING

The Monday run: last week’s winners become this week’s tests

What the run makes

1. Finds the test winners by sales and cost per install
2. Cuts new hooks onto the winning videos
3. Makes image variations of the winning images
4. Records avatar clips for the winning angle
5. Builds AI video variations and visual hooks
6. Renders kinetic text ads at no credit cost
7. Sends the report to chat and the dashboard

Home · run steps, credits, quality checks

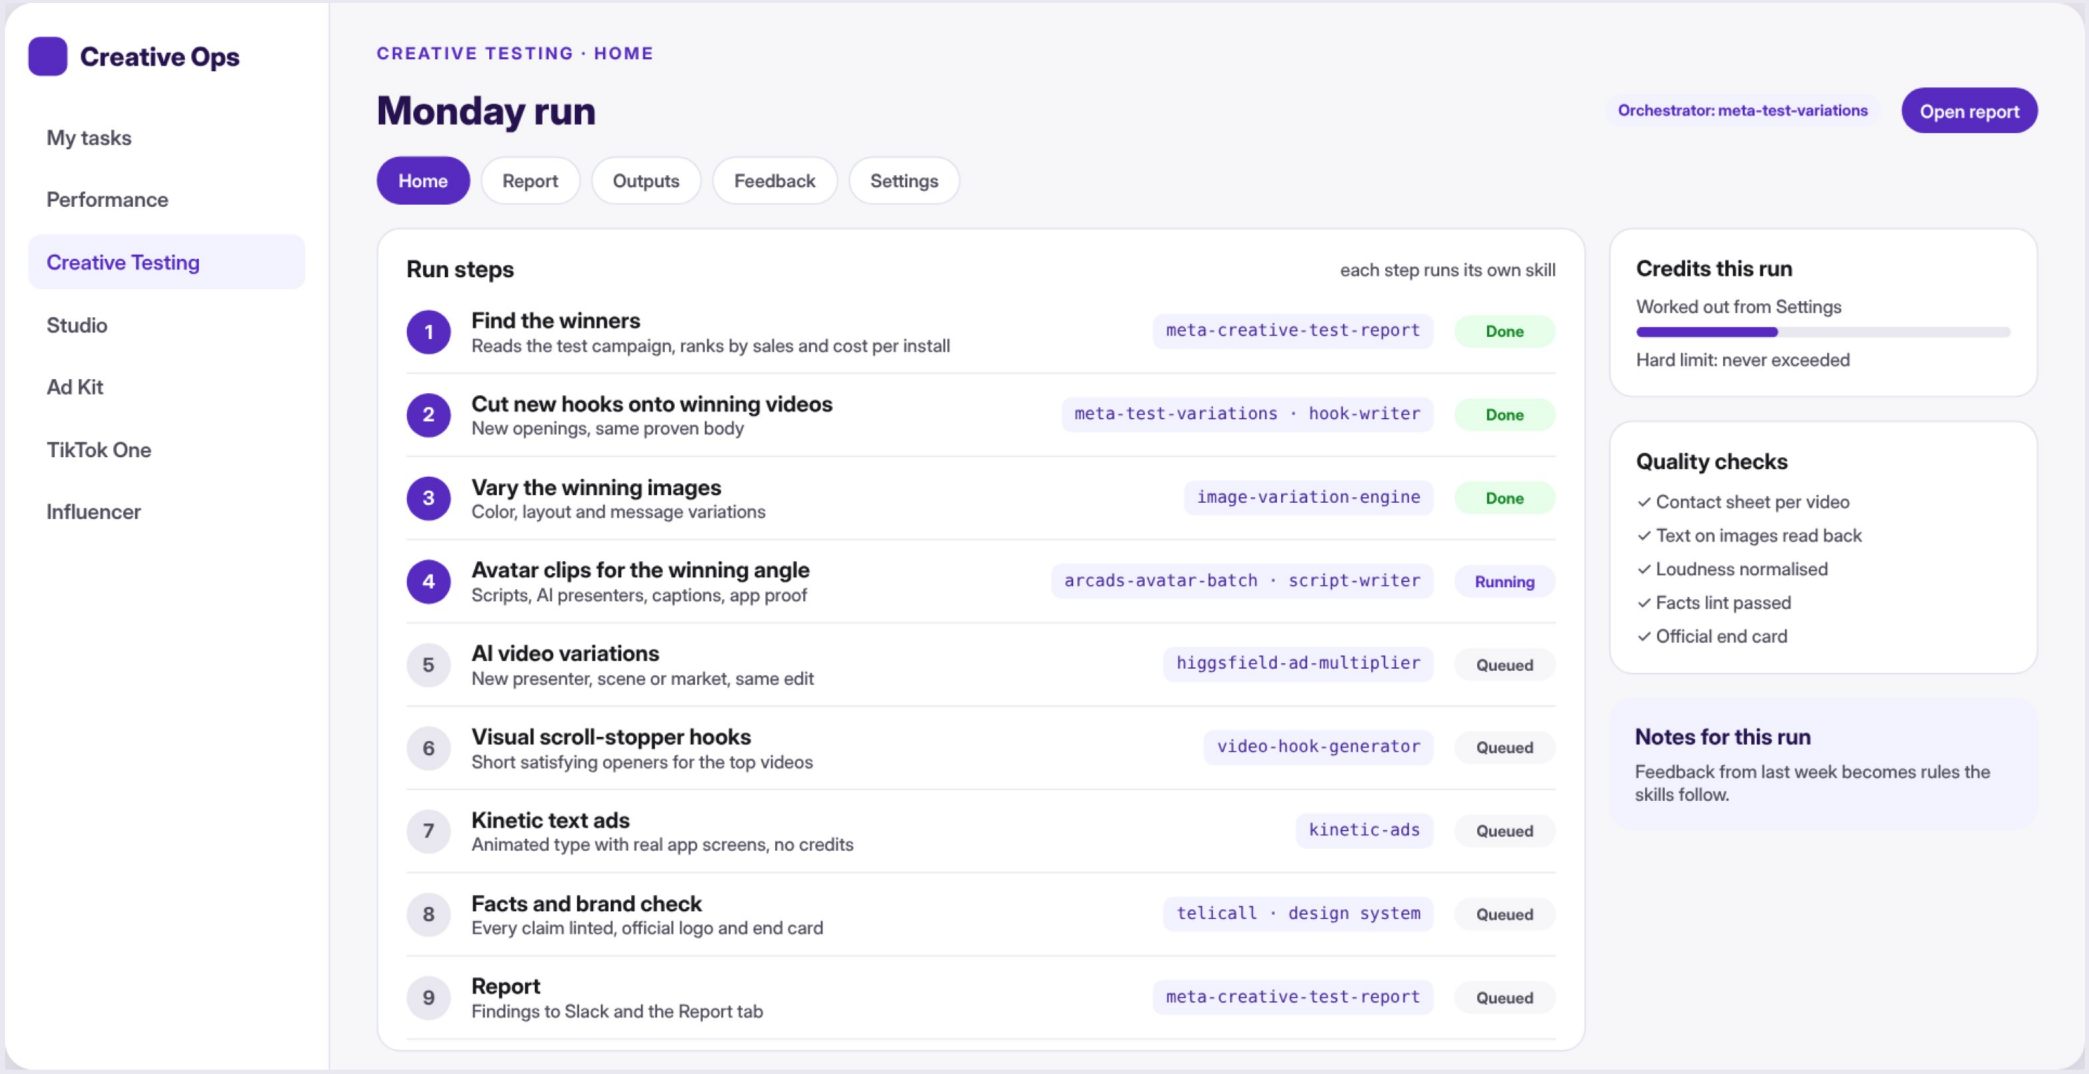

Report · same window every week, results by format, what to do next

Outputs · every file, previewable, ready to upload

Feedback · notes the next run must follow

Settings · how much to make; the credit budget follows, with a hard limit

THE MONDAY RUN ENGINE · ONE SKILL PER STEP

FEEDBACK LOOP

Every note becomes a rule

A question hits the bell → I answer or leave a note → AI fixes the output → Rule goes into the skill → Every next run follows it

Fixed for good

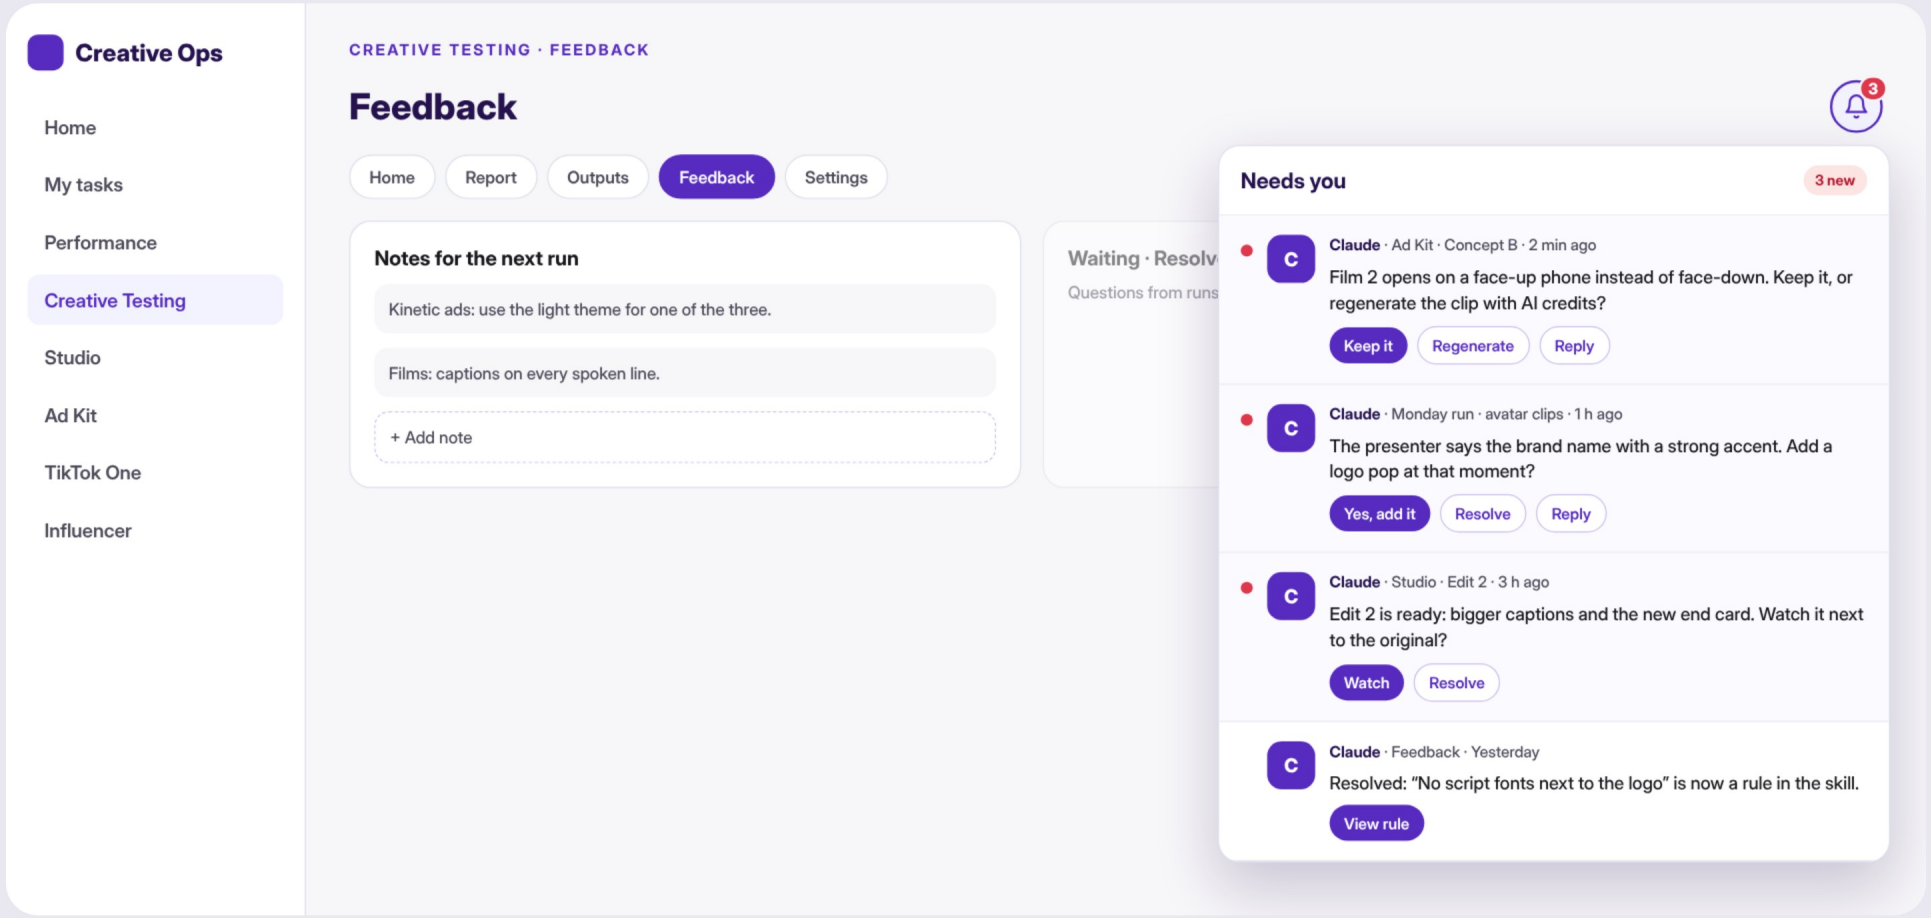

- Retyped logo or wrong font: official brand files only
- A price outside the rules: the facts lint blocks it
- Pricey image model: a cheaper default, fallback only
- A kit missing pieces: final QC lists every gap
- No captions on films: captions are now standard

Still needs an eye

- AI faces drifting: reference stills and chained clips
- Garbled text on screens: screens kept blurred or away
- Accents blurring the brand name: captions and logo pop
- Bold claims and ad review: flagged before production
- Taste: the call on what to support with visuals stays mine

FEEDBACK LOOP · IN THE DASHBOARD

Questions land in the dashboard like a social feed

PERFORMANCE

Live numbers, and a weekly read on what to do with them

Live view

Meta, TikTok and Google, straight from the ad accounts. Pick dates, platform and campaigns; filter by name.

Read only: nothing on this screen can change a campaign.

Creative diagnostics

Every week the creatives are sorted into four action lists: what is tiring, what won but was never scaled, what hooks but does not convert, and what is ready to iterate.

PERFORMANCE · WEEKLY DIAGNOSTICS

Four lists, each with a reason and a next step

Creative fatigue

Ads whose results slide week over week while frequency climbs. **Next:** a refresh with a new opening, same body.

Test winners not scaled

Ads that won their test but never left test budget. **Next:** a scale recommendation for the media buyer.

Hooked, low results

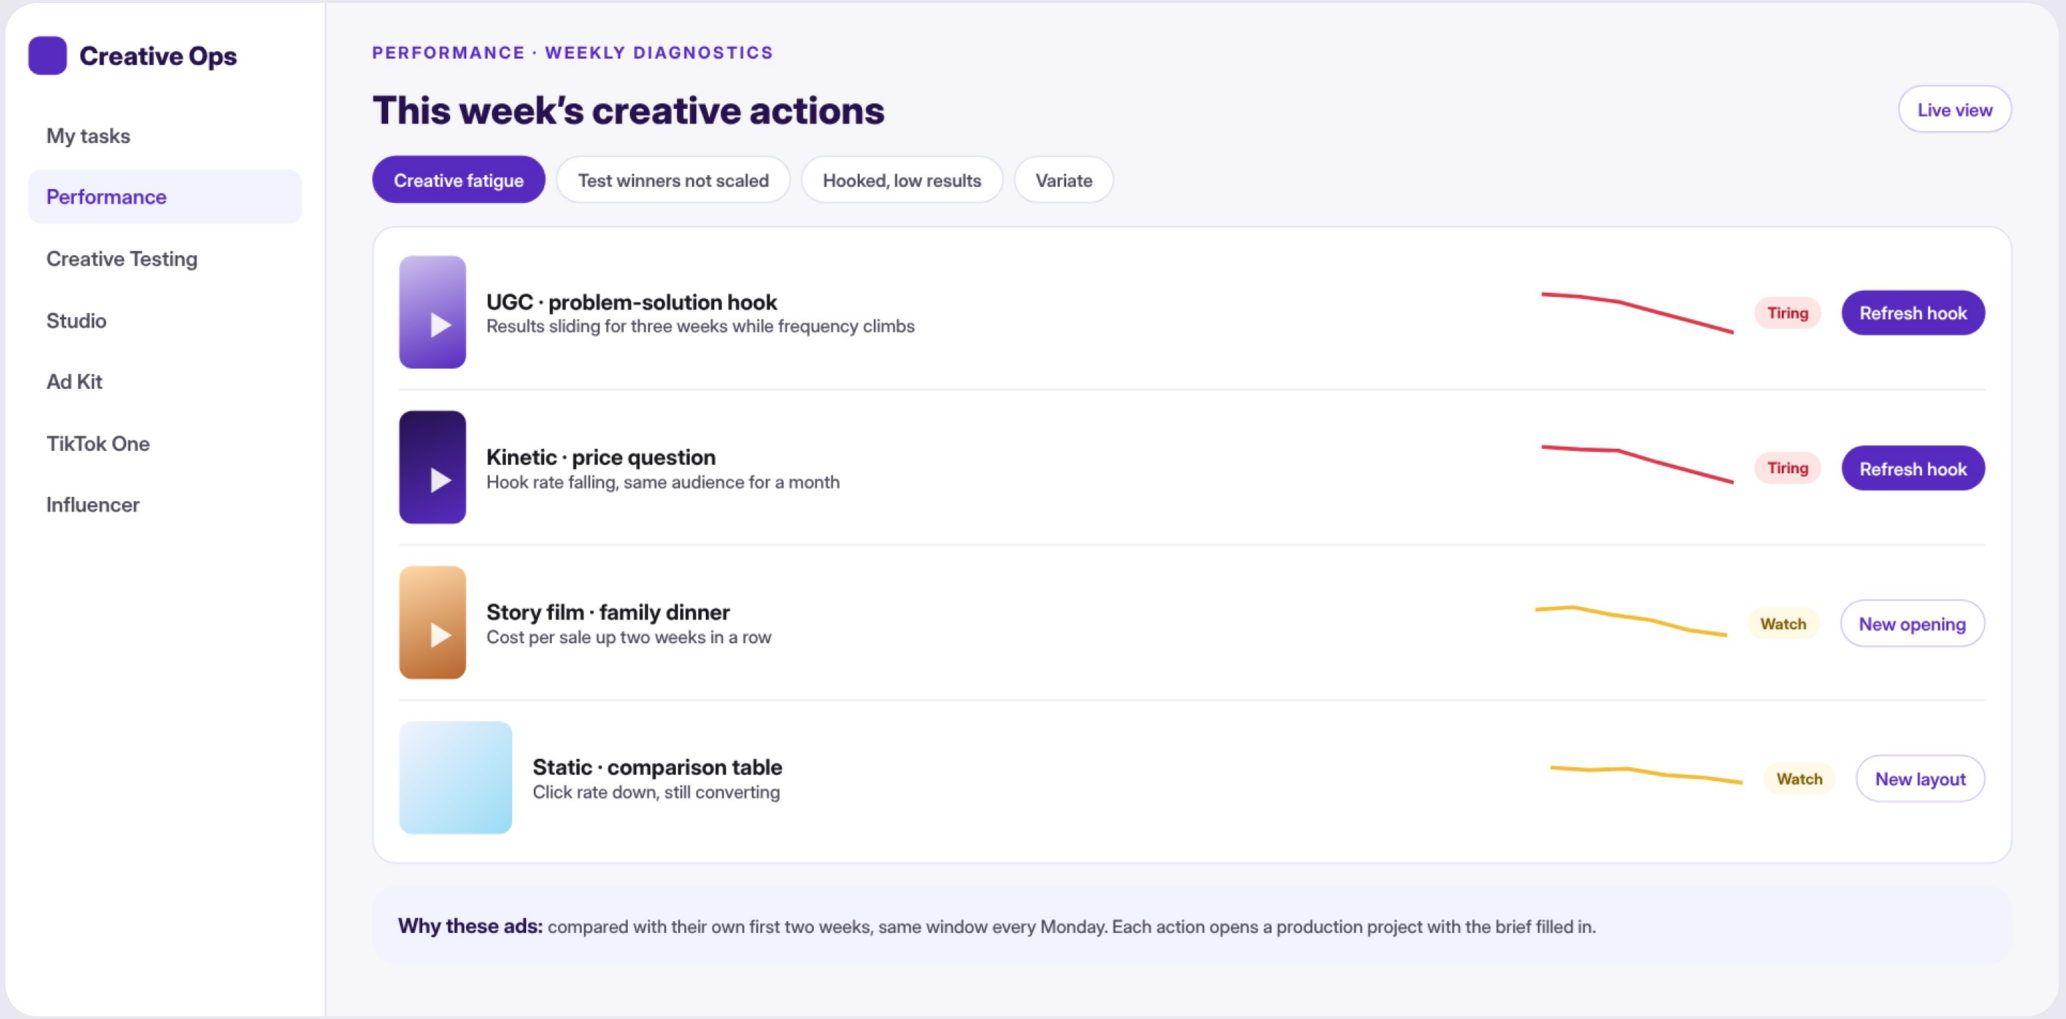

Strong hook and hold rates, weak conversion: the opening works, the rest does not. **Next:** keep the hook, rewrite body and CTA.

Variate

Proven winners ready to iterate. **Next:** variations that change one thing at a time: hook, presenter, format or language.

Every item can be sent to production from the list in one click.

WEEKLY DIAGNOSTICS · IN THE DASHBOARD

TIKTOK ONE

Creator content at scale, from brief to ready-to-launch

Create

Pick settings, get a full campaign brief, every field in its own box, every claim fact-checked.

Listings

Every live listing by country, active or dormant at a glance.

Videos

Incoming creator videos with hook and hold rates, marked ready to launch or already in an ad.

Reports

A weekly per-listing report: new videos, ready ones, launched ones.

INFLUENCER

Find the right creators, reach out with AI, track every deal

Find

Social search by topic or lookalike creator, with reach and engagement.

Reach out

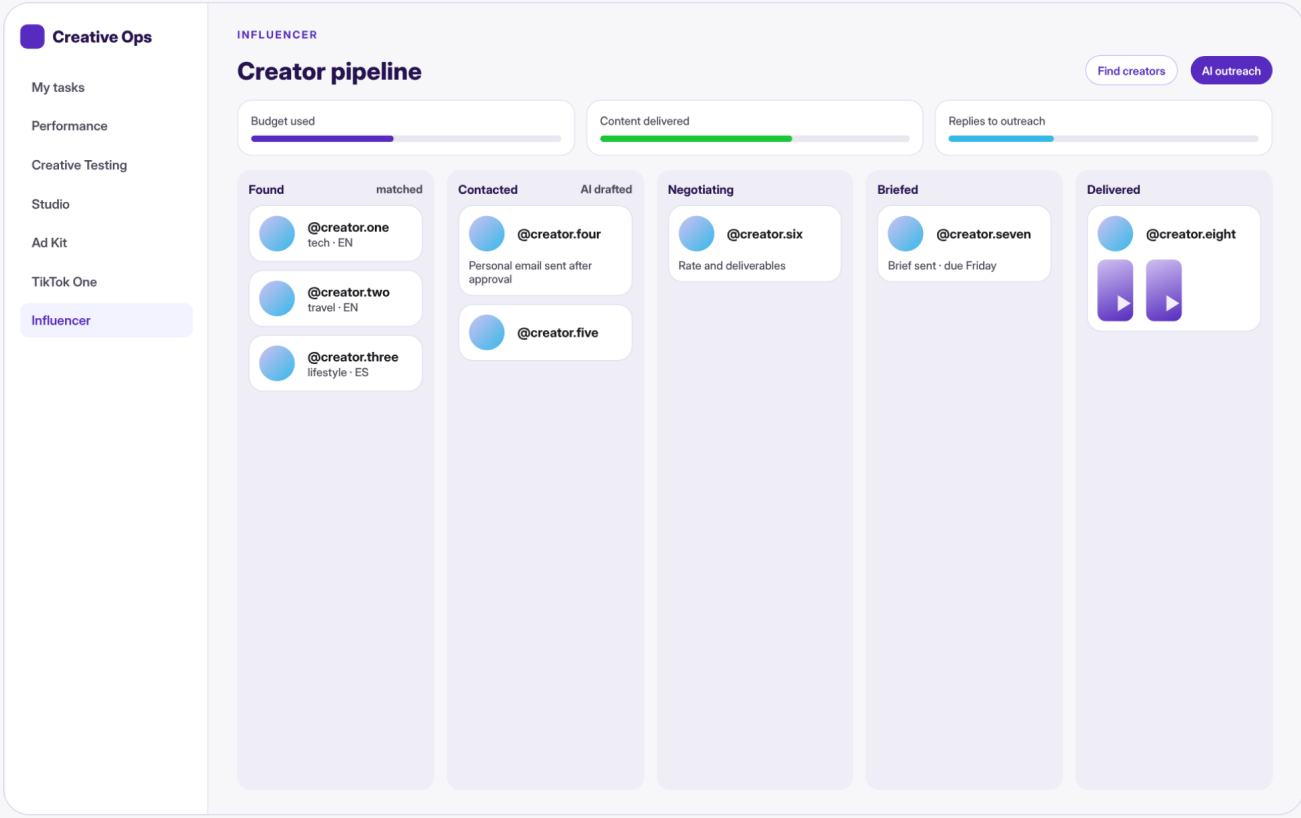

AI writes a personal message per creator; it goes out after approval.

Brief

The same brief writer as TikTok One, fact-checked.

Track

Budget, deliverables and delivered content in one pipeline.

LAUNCH LAYER · ADDITOR

From finished creative to live campaign, without the manual steps

Additor is an AI marketing workspace for performance teams. In its own words: “Find the winner. Make ten more. Launch everywhere.”

Naming and sizing

Each creative is named by workspace rules and resized to 9:16, 1:1 and 4:5.

Upload and launch

Media and campaigns go to Meta and TikTok through their official APIs.

Approval before spend

Test campaigns are drafted with structure and budget; a person approves.

Creative reporting

Winners by creative code, with hook and hold rates and cost metrics.

Anomaly alerts

Spend spikes and problems flagged early, with suggested fixes.

Ask your ad accounts

Natural-language questions and tasks, with workspaces, roles and an audit log.

GUARDRAILS

AI does the work; I keep the keys

Approval before spend

Every paid generation shows its plan and cost first; budgets have hard limits.

One source of facts

Prices and claims come from one fact sheet; a lint blocks anything else.

Read only on ad accounts

The dashboard reads campaigns; changes happen only in the launch layer, with approval.

One design system

Official logo, end cards and colors; the AI never redraws the brand.

Quality check last

Every video and image is reviewed before it is marked done.

Feedback that sticks

Notes become rules for the next run and are written into the skills.

The machine runs.
I steer.
